Features & Benefits

- o Yields a higher quality and homogenized mixture with less efforts. Up to 2 times faster than mechanical mixers
- o Reduce mixing times by mixing in the original container. Easily transferred to other tank if needed
- o Helps reduce stratification (layering) during storage
- o Uniform temperature stabilization. No heat input to the mixture
- o Mixing equipment is food grade quality – stainless steel, aspectic welding – suitable for sanitary operations food grade processing
- o Eliminates risk of repellency (lubricating oil from mixer dropping into mixture)
- o Helps to minimize air entrainment (tiny bubbles inside the mixture) which all mechanical mixers have this issue
- o Uses less energy than alternative options
